COMPARISON
NOVEMBER 2026

KONVU VS DEPENDABOT

From Dependabot alert to tested fix.

Konvu investigates Dependabot alerts, proves exploitability in your code and deployment, resolves the upgrade path, repairs affected code and opens a tested fix PR. On our own repositories in Q3 2026, Konvu assessed 10 of 384 alerts as exploitable. Your engineers get the evidence behind the decision and a fix to review.

Your team reviews and merges. **Keep Dependabot alerts enabled; Konvu handles security remediation.**

AT A GLANCE

	DEPENDABOT	KONVU
Decision	Advisory matches, auto-triage rules and JS/TS reachability preview	Exploitability investigation with evidence from code and deployment
Fix workflow	Security update PRs; GitHub also offers agent-assigned fixes	Resolves upgrades, repairs affected code and runs tests
Scope	Dependency vulnerabilities and routine version updates	Dependency and code findings from connected scanners
Dismissals	GitHub alert management and auto-triage rules	Approved dismissals write back with evidence
Setup	GitHub-native dependency tooling	Reads alerts; separate Autofix app; automatic PRs opt-in per repo
Cost	Security updates are free	Business $2,000/month with 400 confident verdicts; free trial

Where Dependabot is stronger

- GitHub-native alerts, advisory data and security updates.
- Routine dependency version updates without a CVE.

Where Konvu fits

- Security backlogs larger than your team can investigate by hand.
- Upgrades that need dependency constraints resolved and call sites rewritten.
- Decisions with evidence and tested fix PRs for review.

TAKING OVER SECURITY REMEDIATION

Konvu handles the investigation and fix.

01
Read findings
Connect your scanner and repository. Keep alerts enabled.

02
Investigate and fix
Review verdicts. Enable the separate Autofix app for tested fix PRs.

03
Review and merge
Give one tool security PR ownership. Your team reviews and merges.

Detection is solved. The decision is not.
