konvu

COMPARISON
NOVEMBER 2026

KONVU VS RENOVATE

Automate the investigation and the security fix.

Konvu is a Renovate alternative for vulnerability remediation. It investigates scanner findings, proves exploitability, resolves the upgrade path, repairs affected code and opens a tested fix PR. Engineers review the evidence and the change together. Renovate can continue routine version maintenance.

Your team reviews and merges. **Konvu reads scanner findings and opens its own fix PRs.**

AT A GLANCE

	RENOVATE	KONVU
Security input	GitHub vulnerability alerts or optional OSV checks	Findings from supported scanners, including Dependabot
Decision	Advisory data and configured update rules	Exploitability evidence from code, configuration and attacker input
Finding scope	Dependency maintenance and security updates	Dependency and code findings from connected scanners
Code changes	Configured post-upgrade commands on self-hosted setups	Investigates the required change and repairs affected call sites
Tests and merge	CI status checks and configurable automerge	Runs tests; your team reviews and merges by default
Cost	Open source and hosted free options; paid enterprise	Business $2,000/month with 400 confident verdicts; free trial

Where Renovate is stronger

- Shared presets and custom managers for routine maintenance.
- Broad SCM support, self-hosting and configured post-upgrade tasks.

Where Konvu fits

- Security backlogs larger than your team can investigate by hand.
- Upgrades that need dependency constraints resolved and call sites rewritten.
- Decisions with evidence and tested fix PRs for review.

TAKING OVER SECURITY REMEDIATION

Konvu handles the investigation and fix.

01
Read findings
Connect your scanner and repository. Keep alerts enabled.

02
Investigate and fix
Review verdicts. Enable the separate Autofix app for tested fix PRs.

03
Review and merge
Give one tool security PR ownership. Your team reviews and merges.

Detection is solved. The decision is not.
